PARTS IN MOTION

SOFTWARE DEVELOPER

About us:

We are looking for a passionate, hard-working, and talented Software Developer to join our team.

Parts In Motion is the fastest growing online vehicle components business in Europe. Our business trades on eBay, Amazon and our own website. We have doubled in size each year for the past three years by applying software solutions and automation within an industry that has historically relied on manual process. This role is an opportunity to make a significant impact in an exciting journey with a team of professionals with FTSE100 experience and a solid track record of performance. We enjoy succeeding and reward performance. Opportunities to progress at this speed of growth are unavoidable!

About you:

We are looking for a talented hands-on Software Developer to design, develop and maintain great solutions for our customers, partners and internal teams. You will be able to express your views on the right technologies to enable the business to continue its high growth trajectory. You will work as part of a small, agile and dynamic team based in Exeter.

This role requires an ability to investigate, research and solve technical challenges, working closely with decision makers in other departments, identifying, recommending, documenting and implementing high quality, cost-effective technology solutions for all aspects of the business. You can identify why a particular solution has been requested and ensure your recommendations consider the whole problem. Solutions you develop will have both external and internal impact; visible to our external customers and partners, and improving the efficiency of Parts In Motion teams' processes.

The team run regular sessions where you can experiment with and learn new technologies, share your experiences with teammates and run technical ideas within the team. We continually evaluate our technology options to determine the right approach for each project, e.g. PHP, Ruby, Go, Node.js, Laravel, Symfony, MySQL, NoSQL, AWS, Azure, Google Cloud etc.

This opportunity suits a highly motivated and talented full stack software engineer who wants to apply and grow their technical depth and breadth. Your creative ideas and energy to the team will be a significant contributor to the thriving success of the company.

Skills:

*Essential***:**

- Building complex software systems in an agile environment that have been successfully delivered to customers
- Communicating effectively with technical and non-technical users, and senior management to collect requirements and describe software product features, technical designs and product strategy
- Setting and managing expectations
- Understanding computer science fundamentals including object-oriented design, data structures, algorithm design, and complexity analysis
- Designing and building data-driven web applications, integrating with third party RESTful APIs
- Attention to detail, analytical thinking, methodical, problem solving ability, and strong time management skills
- A desire and enthusiasm to evaluate new/alternative technologies and approaches

Desirable:

- Knowledge of PHP 7 and MySQL, working with MVC frameworks in a Linux environment
- In-depth knowledge of front-end standards such as HTML5, JavaScript and jQuery
- Use of test-driven development techniques
- Experience working in Jira or a similar tool
- Integrating with third party APIs such as eBay, Amazon, Fed Ex and Royal Mail
- Database design, performance tuning and maintenance
- Building a strong user experience for a multitude of devices and browsers
- Hands-on expertise in disparate technologies, from front-end user interfaces through to back-end systems and anything in-between
- Automated testing and continuous delivery
- Information Security expertise
- Linux system administration
